Summary

Computer science graduate student with a strong fundamental understanding of data structures, algorithms, and object-oriented programming through coursework and solved problems on LeetCode and GeeksforGeeks. Hands-on experience building and testing REST APIs and full-stack, multi-person production applications using Java/Spring Boot, Node.js/Express.js, and React.js. Comfortable working in existing codebases, debugging issues, responding to code review feedback, and collaborating with teammates on technical tasks.

Experience

React.js Developer Intern Jan. 2024 – Jun. 2024

LongSwitch Software Solution Pvt. Ltd. *Surat, India*

- Developed and integrated reusable application components with REST APIs, implementing CRUD functionality and JWT-based authentication across multiple production applications.
- Investigated application defects by tracing logs, API requests, and service interactions to identify root causes and improve reliability, learning unfamiliar parts of the codebase independently.
- Gave and received technical feedback through code reviews and design discussions with senior developers and cross-functional teammates during Agile sprints.

Projects

Capital Bridge | *Java, Spring Boot, PostgreSQL, JWT, React.js, Docker Github* Feb. 2026 – May. 2026

- Designed a relational data model and independently built 20+ REST API endpoints in Java and Spring Boot for a role-based, multi-user full-stack application, forming an understanding of the system end to end.
- Implemented JWT-based authentication and role-based authorization for Creator, Investor, and Admin workflows, writing endpoint logic that handles and validates incoming HTTP requests.
- Built database operations with Spring Data JPA and PostgreSQL, including project management, investments, and user-related functionality.
- Tested API workflows with Postman for correctness and edge cases, and containerized the application with Docker for reproducible development and deployment.

Tourpedia | *Node.js, Express.js, MongoDB, React.js, Docker* Github Sept. 2025 – Nov. 2025

- Built a full-stack web application for generating and visualizing personalized travel itineraries, working across frontend (React.js), backend (Node.js/Express.js), and database (MongoDB) layers.
- Designed REST API integrations and data models for user profiles, travel preferences, and itinerary information.
- Independently researched and resolved issues spanning the full stack, from UI state to deployment configuration.

Education

Savitribai Phule Pune University Sep. 2024 – Jun. 2026

Master of Computer Application (MCA), CGPA: 8.25 *Pune, India*

Technical Skills

Programming Languages: Java, JavaScript, C++, Python, SQL
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS, REST APIs, MVC, Authentication, HTTP
Backend: Java Spring Boot, Node.js, Express.js, JWT
Frontend: React.js, Next.js, TypeScript, HTML, CSS
Databases: PostgreSQL, MongoDB, MySQL
Tools & Practices: Git, GitHub, Docker, Postman, GitHub Actions, Agile/Scrum, Code Review

Achievements & Leadership

- **Event Lead:** Led a team of 8 in organizing a college technology event with 100+ participants, coordinating logistics, communication, and execution.
- **Problem Solving:** Solved Data Structures and Algorithms problems across LeetCode and GeeksforGeeks; placed 2nd in an inter-college programming contest.
