SUMMARY

Full-stack software engineer with hands-on experience across the stack this role requires: React on the front end, and Java/Spring Boot and Node.js/Express on the back end, building REST APIs backed by SQL and NoSQL databases. Comfortable with Git-based Agile workflows, code reviews, and collaborating cross-functionally to ship production-ready features.

EXPERIENCE

React.js Developer Intern

Jan. 2024 – Jun. 2024

LongSwitch Software Solution Pvt. Ltd.

Surat, India

- Built 10+ reusable front-end and back-end components with CRUD and REST API integration, applying JWT-based authentication and access control across 3 applications.
- Clarified ambiguous requirements directly with stakeholders before implementation, translating them into technical specifications and documentation to reduce rework.
- Investigated and resolved defects across 5+ interconnected REST APIs by tracing logs and service interactions to identify root causes, improving reliability of a live production application.
- Participated in code reviews and Agile sprint ceremonies as part of a cross-functional team, incorporating feedback from senior engineers to raise code quality and maintainability.

PROJECTS

Capital Bridge | *Java, Spring Boot, PostgreSQL, JWT, React.js, Docker*

GitHub

- Designed and built 20+ REST API endpoints with full CRUD operations in Java and Spring Boot, supporting a full-stack application with 3 distinct user roles and role-based service layers.
- Implemented JWT-based authentication and authorization using object-oriented design principles and MVC architecture across backend services to enforce secure, role-based access.
- Designed normalized relational schemas in PostgreSQL, validated API behavior with Postman, and containerized services with Docker for reproducible, scalable deployment.

Tourpedia | *Node.js, Express.js, MongoDB, React.js, Docker*

GitHub

- Built a scalable RESTful backend service from scratch using Node.js and Express.js, independently designing the application architecture and REST API endpoints.
- Used MongoDB to store user profiles, travel preferences, and itinerary data, leveraging its flexible document model for dynamic travel information.
- Integrated a React.js frontend with backend APIs for dynamic itinerary generation and visualization, and containerized the application using Docker for consistent development and deployment.

EDUCATION

Savitribai Phule Pune University

Sep. 2024 – June 2026

Master of Computer Application (MCA)

Pune, India

- Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems. Solved 500+ DSA problems across LeetCode and GeeksforGeeks.

LANGUAGES & TECHNOLOGIES

Languages: Java, JavaScript, TypeScript, C++

Frontend: React.js, Next.js, HTML, CSS

Backend & APIs: Spring Boot, Node.js, Express.js, RESTful API Design, MVC Architecture, JWT Auth, OOP & Design Patterns

Databases: PostgreSQL, MongoDB, SQL

Tools & Practices: Git, GitHub Actions, Postman, Docker, Agile/Scrum, Data Structures & Algorithms (450+ solved)

ACHIEVEMENTS & LEADERSHIP

- **Open Source:** Submitted a pull request to bench-routes/benchdocs fixing a dark-mode navigation logo visibility issue (pending review). Won 2nd place in an inter-college competitive programming contest.
- **Event Lead — Bid & Earn:** Led a team of 8 organizing a college tech event for 100+ participants, managing logistics, communication, and execution end-to-end.
