SUMMARY

Software engineer with hands-on experience building responsive, reusable React.js interfaces and integrating them with REST APIs for real-time, data-driven experiences. Reduced code duplication by ~30% across 3 applications by building reusable frontend components during a React.js internship, and independently built a full React.js frontend for a travel itinerary platform. Comfortable working in an Agile/Scrum environment, participating in code reviews, debugging UI issues across browsers, and using Git for version control.

EXPERIENCE

React.js Developer Intern

Jan. 2024 – Jun. 2024

LongSwitch Software Solution Pvt. Ltd.

Surat, India

- Built 10+ reusable React.js components with consistent design and CRUD/REST API integration, applying JWT-based authentication and cutting code duplication by ~30% across 3 applications.
- Debugged and resolved UI and integration issues across 5+ interconnected REST APIs by tracing logs and service interactions to identify root causes, improving reliability of a live production application.
- Participated in code reviews and Agile ceremonies, incorporating feedback from senior engineers to raise code quality and maintainability, and wrote unit and API test cases in Postman ahead of every review.
- Collaborated in a multi-developer Git feature-branch workflow — submitting pull requests, writing component and workflow documentation, and clarifying ambiguous requirements with stakeholders before implementation.

PROJECTS

Tourpedia | *React.js, Node.js, Express.js, MongoDB, PostgreSQL, Prisma, Docker*

GitHub

- Built a React.js frontend integrated with backend REST APIs for real-time itinerary visualization, ensuring a responsive, data-driven user experience.
- Designed the backend service architecture from scratch in Node.js and Express, combining PostgreSQL and MongoDB to support both relational and flexible data needs.
- Researched and applied an unfamiliar BERT-based recommendation technique with minimal guidance, then containerized the application with Docker for reproducible deployment.

Capital Bridge | *Java, Spring Boot, PostgreSQL, JWT, JUnit, React.js, Docker*

GitHub

- Designed and built 20+ well-tested REST API endpoints with full CRUD operations in Java and Spring Boot, supporting a full-stack application with 3 distinct user roles.
- Implemented JWT-based authentication and authorization using object-oriented design principles across backend services to enforce secure, role-based access.
- Designed normalized relational schemas in PostgreSQL and validated API behavior with JUnit and Postman before merging, then containerized services with Docker for reproducible deployment.

LANGUAGES & TECHNOLOGIES

Frontend: React.js, React Hooks, Next.js, HTML5, CSS3, JavaScript (ES6+)

Languages: JavaScript, TypeScript, Java, Python, C++

Backend & APIs: Node.js, Express.js, Spring Boot, RESTful API Design, JWT Authentication & Authorization

Databases: PostgreSQL, MongoDB, Prisma ORM, SQL

Infrastructure & CI/CD: Git, Docker, GitHub Actions, AWS (academic exposure)

Quality & Process: Code Reviews, Agile/Scrum, Unit & API Testing (Postman), Technical Documentation

EDUCATION

Savitribai Phule Pune University

Sep. 2024 – May 2026

Master of Computer Application (MCA)

Pune, India

- Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Database Management Systems. Solved 350+ DSA problems across LeetCode and GeeksforGeeks.

ACHIEVEMENTS & LEADERSHIP

- **Open Source:** Submitted a pull request to bench-routes/benchdocs fixing a dark-mode navigation logo visibility issue (pending review). Won 2nd place in an inter-college competitive programming contest.
- **Event Lead — Bid & Earn:** Led a team of 8 organizing a college tech event for 100+ participants, managing logistics, communication, and execution end-to-end.
